

KBRP State of the Station Highlights 5-1-18

Last Thursday KBRP's website, kbrpradio.com went down. It was determined that our old autopay was not working. Patricia Worth gave GoDaddy a new credit card and we are back online. (I will meet soon with Patricia to look at our GoDaddy account)

The Emergency Alert System (EAS) is having a test hookup late Wednesday night. We are almost FCC compliant.

Chris Sawyer put together an app that automatically renames shows for Meg. This will simplify DJ procedures for rebroadcasts.

On Friday April 27 there was a terrible distortion in headphones and speakers in the DJ studio. The problem was coming from the mixing board. It has been fixed and the correct knob position marked on the mixer. Thanks to Noah.

The projector in the Royale was not working properly for Showcase Fatale during their technical rehearsal. I suspected it had overheated so we unplugged it. After it cooled down, it worked fine. It had not been turned off properly 2 days earlier and had stayed on. I connected the clip-on fan to a master switch so it will always turn on and off with the projector. I also wrote up a procedure with the correct way to turn the projector on and off.

There are 3 DJ trainees that are about ready to record their live demos. Chris Sawyer has been training them.

Hippy Gumbo with Dave Downey is back on the air. Thursdays 7-9pm and Mondays 8-10am. Welcome back Dave.
